Legally binding

**Create, manage, e-Sign and verify
important trade documents with ease.**

Tracifier Document management solution creates the digital twin of important trade documents, protects them against fraud, and speeds up the verification process by adding digital fingerprints on documents. While the data is safely stored in enterprise systems, anyone can verify the validity and details of a document in real-time. Blockchain technology blocks counterfeit certificates, making forgeries easily detectable.

That provides a secured data management environment, reduces paper processing lead times, reduces wait times, and increases the end-to-end documentation process.

HOW DOES IT WORK?

1) UPLOAD

Upload the created trade document or report from the enterprise system into the Tracifier app via API connection or manual to digitize the data and assign a digital identity to the test report/certificate. All test reports are tagged and traceable, while the original document is safely stored in the local laboratory system.

2) E-SIGN

the employees can share the documents internally with related colleagues to digitally e-sign and e-seal it just by clicking one button. The function saves time for employees, especially in the sales team, to quickly get the confirmation of their colleagues to authorize the document in less than 15 minutes.

3) SEND

The sales employee can share the e-sealed and e-signed document with customers just by entering their email addresses, and the Tracifier platform will send the document to them immediately. It creates an immutable transaction, secure and highly transparent, making it easy to uncover fraud as the technology will expose any outdated or forged certificates.

This document is authentic from a verified issuer.

Document:

Initiator:	Muster seller
Issue date:	18,02,2023
Status:	Valid
Valid until:	Forever

HOW TO CHECK THE VALIDITY OF THE DOCUMENTS?

There are two ways to verify the document's authenticity in real-time:

THE PUBLIC CERTIFICATE CHECKER PLUGIN

With the public certificate checker plugin installed on the corporates' website. Users can drag and drop the document to check if the documents they received is authenticated and correct or no.

SCAN THE QR CODE ON THE HARD COPY

Scan the QR code on the hard copy of documents with any smartphone device. When scanning the QR code, the app will take users to Tracifier's blockchain, displaying the document ownership and status.

Note: by default, the level of data shown to external parties is controllable by document owners.

THE ADVANTAGES FOR CORPORATES:

Save time

and save cost by eliminating double-check on the release documents.

Faster collaboration

15 min average time of signing and collaborating on a document.

Faster results

real-time document verification enhance the speed of business process.

No learning curve

Tracifier intuitive interface requires no external help or special skills. All you have to do is sign up and START.

Prevent Fraud:

detect fraud as the technology will expose any outdated or forged documents.
